

Question 1

Correct

Marked out of  
3.00

Flag  
question

### Objective

This is a simple challenge to help you practice printing to stdout.

We're starting out by printing the most famous computing phrase of all time! In the editor below, use either `printf` or `cout` to print the string `Hello, World!` to stdout.

### Input Format

You do not need to read any input in this challenge.

### Output Format

Print `Hello, World!` to stdout.

### Sample Output

`Hello, World!`

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main()
3 {
4     printf("Hello, World!");
5     return 0;
6 }
7
```

	Expected	Got	
✓	Hello, World!	Hello, World!	✓

Passed all tests! ✓

**Question 2**

Correct

Marked out of  
5.00 [Flag question](#)**Objective**

This challenge will help you to learn how to take a character, a string and a sentence as input in C.

To take a single character `ch` as input, you can use `scanf("%c", &ch);` and `printf("%c", ch)` writes a character specified by the argument `char` to `stdout`:

```
char ch;  
scanf("%c", &ch);  
printf("%c", ch);
```

This piece of code prints the character `ch`.

**Task**

You have to print the character, `ch`.

**Input Format**

Take a character, `ch` as input.

**Output Format**

Print the character, `ch`.

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>  
2 int main()  
3 {  
4     char ch;  
5     scanf("%c",&ch);  
6     printf("%c",ch);  
7     return 0;  
8 }
```

	Input	Expected	Got	
✓	C	C	C	✓

Passed all tests! ✓

### Question 3

Correct

Marked out of  
7.00

Flag  
question

#### Objective

The fundamental data types in C are int, float and char. Today, we're discussing int and float data types.

The `printf()` function prints the given statement to the console. The syntax is `printf("format string", argument_list);`. In the function, if we are using an integer, character, string or float as argument, then in the format string we have to write `%d` (integer), `%c` (character), `%s` (string), `%f` (float) respectively.

The `scanf()` function reads the input data from the console. The syntax is `scanf("format string", argument_list);`. For ex: The `scanf("%d", &number)` statement reads integer number from the console and stores the given value in variable `number`.

To input two integers separated by a space on a single line, the command is `scanf("%d %d", &n, &m)`, where `n` and `m` are the two integers.

#### Task

Your task is to take two numbers of **int data type**, two numbers of **float data type** as input and output their sum:

1. Declare 4 variables: two of type **int** and two of type **float**.
2. Read 2 lines of input from `stdin` (according to the sequence given in the 'Input Format' section below) and initialize your 4 variables.
3. Use the `+` and `-` operator to perform the following operations:
  - o Print the sum and difference of two **int** variable on a new line.
  - o Print the sum and difference of two **float** variable rounded to one decimal place on a new line.

#### Input Format

The first line contains two integers.

The second line contains two floating point numbers.

#### Constraints

- $1 \leq \text{integer variables} \leq 10^4$
- $1 \leq \text{float variables} \leq 10^4$

#### Output Format

Print the sum and difference of both integers separated by a space on the first line, and the sum and difference of both

space on the first line, and the sum and difference of both float (scaled to 1 decimal place) separated by a space on the second line.

#### Sample Input

```
10 4
4.0 2.0
```

#### Sample Output

```
14 6
6.0 2.0
```

#### Explanation

When we sum the integers 10 and 4, we get the integer 14. When we subtract the second number 4 from the first number 10, we get 6 as their difference.

When we sum the floating-point numbers 4.0 and 2.0, we get 6.0. When we subtract the second number 2.0 from the first number 4.0, we get 2.0 as their difference.

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main()
3 {
4     int a,b;
5     float c,d;
6     scanf("%d%d",&a,&b);
7     scanf("%f%f",&c,&d);
8     printf("%d",a+b);
9     printf(" %d",a-b);
10    printf("\n%.1f",c+d);
11    printf(" %.1f",c-d);
12    return 0;
13 }
```

	Input	Expected	Got	
✓	10 4 4.0 2.0	14 6 6.0 2.0	14 6 6.0 2.0	✓
✓	20 8 8.0 4.0	28 12 12.0 4.0	28 12 12.0 4.0	✓

Passed all tests! ✓
